Figure S1

Description of the supplement video and dataset.

Additional Supporting Information (Files uploaded separately)

Movie S1: Evaporation progression of a 20 ppt NaCl solution droplet (control, no UD1022) recorded by optical microscopy (Treatment C-20ppt).

Movie S2: Evaporation progression of a 20 ppt NaCl solution droplet with UD1022 treatment recorded by optical microscopy (Treatment T-20ppt).

Movie S3: Evaporation progression in a sand-packed microchannel with 20 ppt NaCl solution (control, no UD1022) recorded by optical microscopy (Treatment C-20ppt).

Movie S4: Evaporation progressions in a sand-packed microchannel with 20 ppt NaCl solution and UD1022 treatment recorded by optical microscope (Treatment T-20ppt).

Datasets S1: the cumulative evaporation measurement data presented in this study.

Introduction

The supporting information includes movies of the time-lapse evaporation progression of the sessile droplet and microchannel packed with sand media described below. The supplemental information also includes the evaporation dataset with replicates. The number of days and cumulative evaporation in cm of water are provided.

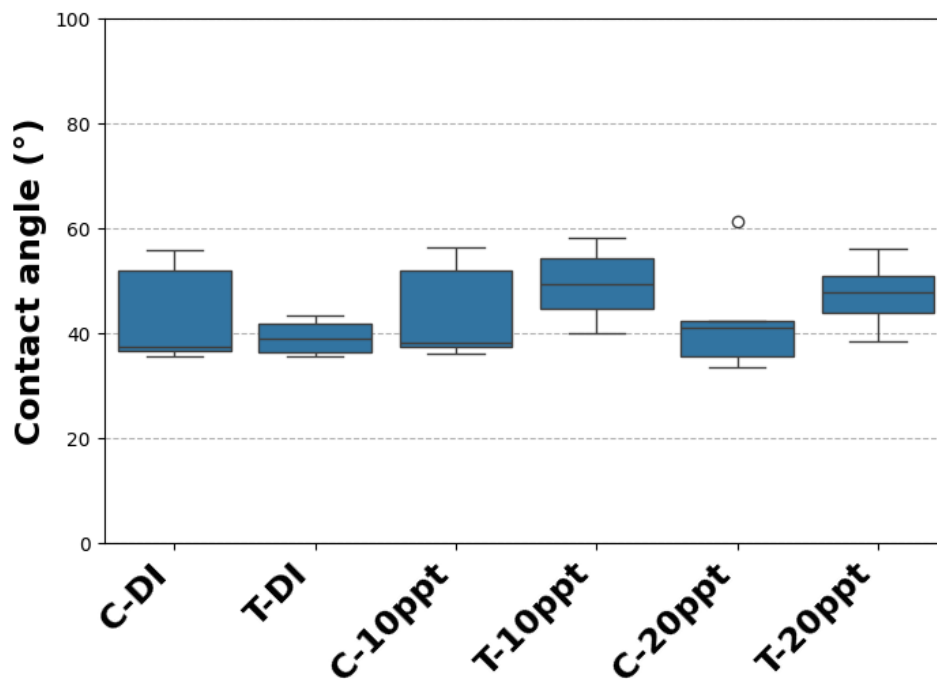

Figure S1. Measured contact angle of sessile droplet on glass surfaces for each treatment (n = 6).

Data Set S1. The cumulative evaporation measurement data presented in this study "ds01.csv".

Movie S1. Evaporation progression of a 20 ppt NaCl solution droplet (control, no UD1022) recorded by optical microscopy (Treatment C-20ppt).

Movie S2. Evaporation progression of a 20 ppt NaCl solution droplet with UD1022 treatment recorded by optical microscopy (Treatment T-20ppt).

Movie S3. Evaporation progression in a sand-packed microchannel with 20 ppt NaCl solution (control, no UD1022) recorded by optical microscopy (Treatment C-20ppt).

Movie S4. Evaporation progressions in a sand-packed microchannel with 20 ppt NaCl solution and UD1022 treatment recorded by optical microscopy (Treatment T-20ppt).
